

For Immediate Release

3D Symbol Library for The Building Controls Industry

Ankeny , IA June 2, 2008 Quality Automation Graphics announced today their latest 3D symbol library for building automation systems. The pieces and parts library is available for most building automation systems.

The library consists of common graphics and animations needed to build building controls system graphics. With over 200 components in the library, the customer will be able to build almost any system required on the project. "The resulting system graphics library will give our customers a differentiating advantage over their competitors. The end user will benefit as well, now viewing graphics that represent current design standards", says Russell Zimmerman Vice President of Quality Automation Graphics.

Quality Automation Graphics offers the library to any company interested in gaining a competitive advantage in the building automation industry. Options for custom graphic libraries and source code ownership are available.

About Quality Automation Graphics

Quality Automation Graphics is an innovative leader, designing graphical user interfaces utilizing 3D graphics and animation for the building control industry. Our core competencies: include energy efficiency education, 3D graphic design, interactive applications, graphic outsourcing, symbol library creation, and LCD display solutions. www.qagraphics.com
