

# Building Render Options

QA Graphics can create interior and exterior perspective renderings of virtually any building or site development, and create a photorealistic image. We can take your Revit Files, AutoCAD files, PDFs, or sketches, and provide professional renderings which may include fixtures, furniture, material finishes, equipment, and landscaping features.

## Exterior Building Renders

### High Quality Exterior Building Render

High quality photorealistic, lit, 3D exterior perspective rendering. This view gives your building a dynamic look and feel, just as if you were viewing it in person. Features include realistic detail, transparent window view to see inside the building, landscaping, building texture, and various time of day lighting. Transparent window style requires extra information from client such as lighting position inside, floor plan, and furniture to gain insight as to how the building looks from the inside-out.

### Standard Exterior Building Render

Standard photorealistic exterior building rendering. This view gives your building a dynamic look and feel. Features include realistic detail, mirrored windows, landscaping, building texture, and various time of day lighting.

## Interior Building Renders

### Residential Living Room Interior Perspective

Multi-family/residential interior renders create photorealistic renderings of prospective space. Features include fixtures, fittings, material finishes, furniture, equipment, and finishes.

### Commercial Interior Render

Commercial interior rendering of an office space. Features include fixtures, fittings, material finishes, furniture, equipment, and finishes.
