BAS Vector Symbol Library

Realistically Represent Systems On Any Device Without Pixelation

This vector library offers a competitive advantage in the BAS industry, delivering more appealing and realistic graphics than typically provided with BAS software. This library will allow you to be in the field with your mobile device and to view your BAS graphics without pixelation of the graphics.

Addressing the need for responsive design within the industry moving to both large and mobile platforms. The Vector Symbol Library is powerful and includes hundreds of SVGs and animation files, more detailed graphics, and higher resolution images that are easily scalable for a mobile device.

Our library converts building data into powerful visualizations that can be interpreted quickly – so operators can act quickly. As a result, this library can help you keep occupants more comfortable, safe and secure, while optimizing their building operations.

Based off our popular V5 Symbol library, the vector library is a new design using the vector format that includes:

- ✓ More than 450 static graphics with over 100 animations in orthographic view
- ✓ Your 3-letter acronym on major equipment components displaying a watermark on major equipment components to protect the graphics (watermark can be visible or undetectable)
- ✓ Represent mechanical drawings or piping schematics in a graphical view
- ✓ Multiple duct lengths
- ✓ Symbols for energy efficient equipment
- ✓ Symbols available for all types of terminal units
- ✓ Pre-configured terminal air units
- ✓ Data center graphics
- ✓ Tridium Niagara N4 Module included: allows you to easily substitute N4's existing graphics files

Purchase both our Vector & v5 libraries to receive \$500 off.

Our BAS Vector Library has won:
 2019 FacilitiesNet.com Vision Award
 2019 Consulting Specifying Engineer Magazine's - Product of the Year Finalist
