

# 3D Exterior Building Renders

## Custom and Detailed

Below are a few samples of our Exterior Building work. Contact us to discuss your specific project.

QA Graphics can create an exterior perspective rendering of virtually any building or site development, and create a photorealistic image. We can take your Revit Files, AutoCAD files, PDFs, or sketches, and provide professional and realistic-looking renderings. Adding small details has a major impact on how the building or space looks and feels, which may include fixtures, material finishes, equipment, and landscaping features.

## Standard Exterior Building Example

Standard photorealistic exterior building rendering. This view gives your building a dynamic look and feel. Features include realistic detail, mirrored windows, landscaping, building texture, and various time of day lighting.

## High Quality Exterior Building Example

High quality photorealistic, lit, 3D exterior perspective rendering. This view gives your building a dynamic look and feel, just as if you were viewing it in person. Features include realistic detail, transparent window view to see inside the building, landscaping, building texture, and various time of day lighting. Transparent window style requires extra information from client such as lighting position inside, floor plan, and furniture to gain insight as to how the building looks from the inside-out.

## Finishes and Textures

- Custom brick
- Cement
- Wood
- Stone
- Roofing
- Metal roofing
- Siding
- Glass
- Realistic colors
- Windows

## Existing or New Developments

In many cases with commercial properties, there are multiple changes and renovations that are made over time. QA Graphics can assist in the planning phase. Our graphics allow the end result to be visualized before a brick is ever laid on-site.
